

Rodiat Morin

Frontend Developer · Lagos, Nigeria · rodiat.morin@gmail.com · +234 903 603 3530 · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Summary

Frontend-focused engineer with 3+ years building production apps in React, Next.js and TypeScript across construction, insurance, social media, photography and enterprise platforms. Known for clean architecture, with clear module boundaries, predictable data flow, and reusable building blocks teams can extend. Increasingly working across the stack and growing toward solution design.

Experience

Frontend Developer (Full-time) — Etap Insure

2025 – Present

- Built and shipped insurance product features in React and Chakra UI, from spec to production, for 1,000+ internal/customer users.
- Applied a headless vs. presentational component pattern, separating business logic from UI so components are reused across 13 modules in 3 Etap products.
- Used Mixpanel and Hotjar to identify drop-off points in the payment flow, informing design iterations that reduced payment abandonment by 12%.
- Integrated REST APIs across all 3 Etap products, handling loading, error and validation states end-to-end.
- Cut landing page Largest Contentful Paint by ~50% (2.5s → 1.2s) by restructuring the hero so text, not images, became the LCP element.
- Built responsive, accessible interfaces to design specs, working with designers, PMs and backend engineers.

Frontend Developer (Contract) — Jilcon

2025 – 2026

- Built a productivity app for construction professionals in React, Redux and Ant Design.
- Set up consistent theming with Styled Components on top of Ant Design, keeping 10+ screens visually consistent.

- Structured the codebase around headless and presentational components for reuse across features.
- Owned the project management module end-to-end.

Frontend Developer (Contract) — Fotolocker

2025 – 2026

- Built the frontend for an all-in-one photography platform combining AI-assisted booking, shoot management and image proofing in Next.js over 6 months, working in an Agile team through shifting requirements across sprints.
- Delivered three role-based interfaces: a client view for discovering, booking and approving final images; a photographer workspace for managing shoots and proofing; and an admin panel for platform oversight.
- Adapted features and UI as requirements changed, without derailing delivery timelines.

Frontend Developer (Contract) — Duduzili

2024 – 2025

- Built core features for a social media app in React and Redux, from design handoff to working build.
- Implemented UI with Mantine following the product design system.
- Improved responsiveness and load performance across existing web apps through debugging and optimisation.
- Maintained and upgraded legacy web apps and websites alongside designers and PMs.

Frontend Developer (Full-time) — AFEX Nigeria, Abuja

2023 – 2024

- Maintained and upgraded the internal ticketing system used by 5,000+ staff.
- Ran A/B tests on key interfaces and shipped UX changes based on the results.
- Diagnosed and fixed performance bottlenecks across frontend apps, improving load times and responsiveness.
- Translated product briefs into responsive interfaces with developers, UX designers and business analysts.

Skills

- **Languages:** TypeScript, JavaScript, HTML5, CSS

- **Frameworks & state:** React, Next.js, Redux / Redux Toolkit
- **UI & styling:** Tailwind CSS, Chakra UI, Ant Design, Mantine, Styled Components
- **APIs & real-time:** REST APIs, WebSockets
- **Analytics & performance:** Mixpanel, Hotjar, Lighthouse, Core Web Vitals
- **Engineering practice:** Component architecture, SOLID, unit/integration testing, Git, CI/CD, Agile

Education

B.Sc. Chemistry — Federal University of Agriculture, Abeokuta · 2018 – 2023
